Profile

Backend Engineer with **2.7+ years** of experience building scalable **Java Spring Boot microservices**, **Kafka-driven event systems**, and high-performance REST APIs. Experienced in distributed caching, event-driven architecture, and database optimization. Proven track record of highly available systems processing **150K+ events/hour** at **99.9% uptime**. Core expertise in Java, Spring Boot, Kafka, PostgreSQL, Redis, Hazelcast, and Docker.

Technical Skills

Languages: Java (8/11/17/21), Python, SQL, PL/SQL

Backend: Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, REST APIs, OAuth2, JWT, Microservices, Event-Driven Architecture

Messaging & Distributed Systems: Apache Kafka, Redis, Hazelcast, Async Processing, DLQ, Batch Consumers

Databases: PostgreSQL, Oracle, MySQL, Query Optimization, Indexing, Partitioning

Cloud & DevOps: AWS (EC2, S3), Docker, Jenkins, CI/CD, Git, GitLab

Observability & Testing: Micrometer, Prometheus, JUnit 5, Mockito, Testcontainers

Frontend: ReactJS, JavaScript, HTML, CSS

AI Tools: OpenCV, MediaPipe, OpenAI APIs, Cursor AI

Experience

Jio Platforms Limited

Dec 2023 – Present

Backend Engineer

Mumbai, India

- Designed and developed **15+ Spring Boot microservices** powering large-scale location intelligence and tracking platforms, emphasizing scalability, fault tolerance, and maintainability.
- Engineered **Kafka-based event-driven pipelines** processing **150K+ location events/hour** using consumer groups, batching, retries, and Dead Letter Queue (DLQ) strategies.
- Optimized geospatial workloads across **50M+ records** using PostgreSQL query tuning, indexing, and Hazelcast distributed caching, reducing API latency by **22%** and DB load by **28%**.
- Implemented resilience patterns (Circuit Breaker, Retry, Timeout, Fallback) contributing to **99.9% service availability** across production environments.
- Built observability solutions using Micrometer, centralized logging, and monitoring dashboards, reducing Mean Time To Detection (MTTD) by **40%**.
- Designed secure REST APIs with JWT/OAuth2 authentication, request validation, and centralized exception handling.
- Improved code quality via JUnit 5, Mockito, Testcontainers, peer reviews, and SOLID design principles; collaborated with DevOps on Docker/Jenkins CI/CD pipelines.

Projects

Transaction Notification Service

Java, Spring Boot, Kafka, PostgreSQL, Redis, JWT

- Engineered an asynchronous **payment notification platform** processing **10K+ daily events** using Kafka exactly-once semantics for idempotent event delivery.
- Built a high-volume export pipeline for **1M+ transaction records** supporting CSV/JSON batch exports with optimized pagination and sub-500ms query execution.
- Implemented RBAC, idempotency keys, DLQ with exponential backoff, and Resilience4j circuit breakers for production-grade reliability.

AI Gym Trainer

Python, OpenCV, MediaPipe, Computer Vision

- Built a real-time AI fitness trainer using **OpenCV** and **MediaPipe** for posture detection, exercise tracking, and repetition counting via webcam-based inference with optimized low-latency frame processing.
- Extending the platform with **Spring Boot microservices** and AI-powered backend integrations for scalable API architecture.

Education & Certifications

Chandigarh Group of Colleges

2019 – 2023

B.Tech in Information Technology CGPA: 8.2/10

Mohali, India

IBM Java Developer Professional Certificate – Coursera

2026

Software Engineering Job Simulations – JPMorgan Chase, HPE, Wells Fargo (Forage)

2026
