| sohaailkhan.vercel.app

Summary

Java Backend Engineer with overall **2.5 years** of experience building **scalable, high-performance backend systems and microservices** in production environments. Strong proficiency in **Java EE technologies (Spring Boot, Spring MVC, Hibernate/ORM, JPA, JMS), Service-Oriented Architecture (SOA), RESTful APIs, OAuth**, and **distributed systems**. Experienced with **SQL databases, ORM (Hibernate/JPA)**, and **cloud platforms (AWS)**. Built reliable transaction-processing systems handling **150K+ events/hour**. Seeking Backend Software Engineer roles.

Technical Skills

Languages: Java (8, 11, 17), Python, JavaScript, SQL, PL/SQL

Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate (ORM), RESTful APIs, OAuth, JSON, Microservices, Service-Oriented Architecture (SOA), Servlet Containers, Encryption, Decryption

Messaging & Cache: Apache Kafka (JMS), Event-Driven Architecture, Hazelcast, Redis, Distributed Caching

Databases: PostgreSQL, Oracle DB, Query Optimization, Indexing, Partitioning, Schema Design

Cloud & DevOps: AWS (S3, EC2), Docker, Jenkins, Azure DevOps, CI/CD Pipelines, Git, Maven

Testing & Design: JUnit 5, Mockito, JMeter, TDD, System Design, Distributed Systems, API Gateway, Load Balancing, SOLID Principles

Frontend: React.js (basic), Next.js (basic), HTML5, CSS3 **Tools:** IntelliJ IDEA, Postman, Swagger/OpenAPI, Jira, GitHub Copilot

Experience

Jio Platforms Limited

Dec 2023 – Present

Software Development Engineer I – Location Based Services

Mumbai, Maharashtra

- Architected **15+ Spring Boot microservices** (25+ instances) using **Spring MVC, Hibernate/JPA, and SOA principles**, achieving **99.9% uptime** with circuit breakers and connection pooling under high-concurrency production load.
- Built **Apache Kafka (JMS) event-driven architecture** processing **150,000+ messages/hour**, reducing inter-service latency by **30%** and improving fault tolerance via decoupled async consumers.
- Designed and optimized **RESTful APIs** (REST, OAuth, JSON) with improved connection pooling, cutting average latency by **22%** and timeout incidents by **18%** across real-time GPS and geofencing services.
- Automated **PostgreSQL** optimization (partitioning, composite indexing) across **50M+ records**, achieving **40% faster query execution** and **28% lower CPU utilization**; deployed **Hazelcast distributed caching** eliminating redundant DB round-trips.
- Developed **demographic analytics REST APIs** for *RetailVista* managing **22,000+ JioMart/Ajio assets**, enabling store placement intelligence and **10-minute delivery** operations nationwide.
- Participated in full **SDLC** (design, code reviews, implementation, testing, deployment); collaborated with peers, manager, and project leads to deliver high-quality, maintainable backend systems.

Software Engineering Simulations – JPMorgan Chase, HPE, Wells Fargo (Forage)

Jan 2026

- Integrated **Kafka/JMS + Spring Data JPA/Hibernate** in Spring Boot microservice for financial transaction ingestion; built **OAuth-compatible REST APIs** with RestTemplate; verified with JUnit 5 and embedded Kafka test framework.
- Designed normalized **ERD** (1NF–3NF) for financial portfolio system; built **RESTful CRUD APIs** with Spring Boot and Hibernate ORM; validated with **Mockito TDD** suite.

Projects

Transaction Notification Service

Java, Spring Boot, Kafka/JMS, PostgreSQL, JWT/OAuth, Async

- Built **event-driven financial payment processing and notification service** handling **10,000+ daily payment events** using **Kafka/JMS and asynchronous processing**, improving system responsiveness by **25%**; implemented **JWT/OAuth-based authentication and role-based authorization** ensuring secure transaction workflows.
- Developed **high-performance batch export pipeline** for **1M+ financial transaction records** using pagination and streaming, supporting **audit, compliance, and reporting requirements** for large-scale payment systems.

Employee Workflow Platform

Java, Spring Boot, Kafka, PostgreSQL, React.js, Docker, Microservices

- Designed **Kafka distributed workflow engine** processing **50,000+ events/hour**, cutting delays by **40%**; decomposed monolith into **6 DDD microservices** with Docker, reducing release cycle by **30%**.
- Built dead-letter queue error handling pipeline, reducing integration failures by **35%** and improving overall **large-scale, high-performance system** reliability.

Education & Certifications

Chandigarh Group of Colleges

Jul 2019 – Jun 2023

B.Tech, Information Technology — CGPA: 8.2/10

Mohali, Punjab

IBM Java Developer Professional Certificate – Coursera

Nov 2025 – March 2026

Spring Boot & React: Scalable Web Apps – LinkedIn Learning

Oct 2025

Software Engineering Job Simulations – JPMorgan Chase, HPE, Wells Fargo via Forage

Jan 2026
